Going forward and shaping the future

SBT CO_{2e} emissions

Reduce **absolute scope 1 and 2 CO_{2e} emissions by 30%** by 2026

Reduce **scope 3 CO_{2e} emissions by 34.6% per tonne of processed material and use of sold products** by 2030

Product portfolio and environmental energy efficiency

GF is committed to becoming a global sustainability and innovation leader providing superior customer value.

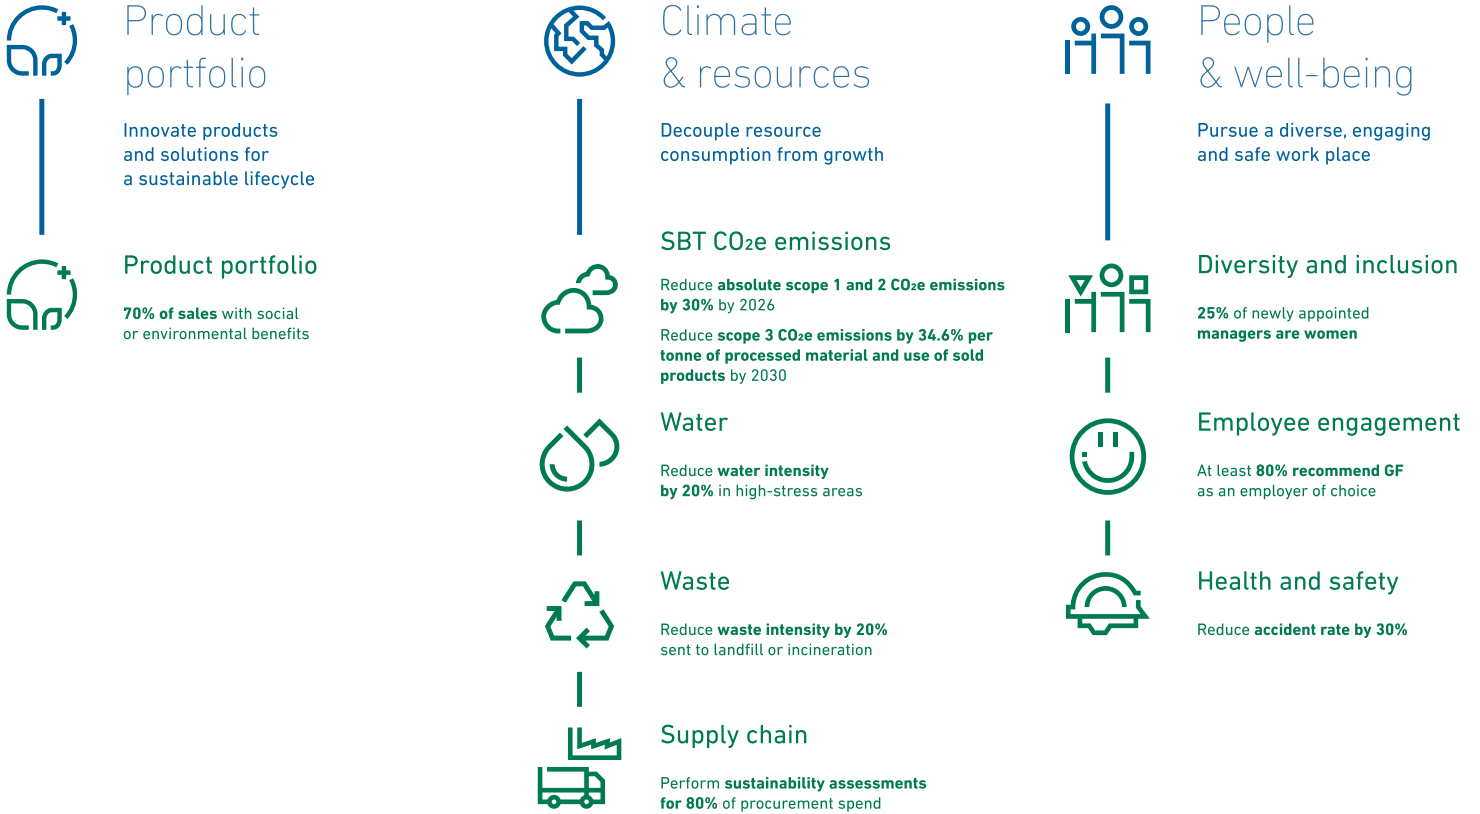

Across its divisions, the company enables the safe and reliable transport of water and gas, empowers greener forms of mobility, and advances energy-efficient and clean manufacturing. As part of its sustainability approach, the company also supports its customers with value-adding services throughout the entire life cycle of each solution.

Product portfolio

70% of sales with social or environmental benefits

Sustainability Framework 2025

Sustainability Governance

As an integral part of GF's business and corporate culture, sustainability is a core focus for GF throughout its entire organization from the highest decision-makers on its Board of Directors to its individual divisions, sites and teams. Its governance structure defines clear responsibilities and accountabilities in its sustainability planning, implementation, tracking and reporting.

Under this sustainability governance structure, GF works to continually raise the sustainability benefits of its product portfolio, lower its green house gas emissions (GHG), reduce waste and preserve natural resources, while creating a safe, diverse, inclusive and engaging workplace. It achieves these goals through defined key performance indicators (KPIs) and tracking and reporting across all levels of the company, in compliance with international standards and strict internal policies. GF's commitment to sustainability governance is reflected in its external ratings, where it consistently receives positive assessments from the world's leading rating agencies

Sustainable packaging solutions

There are different kinds of eco-friendly packaging. Here, are the three categories:

Reusable packaging can be cleaned and used again.

Recyclable packaging can be reused, but mostly after it has gone through processing.

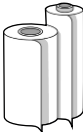

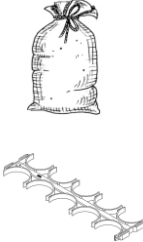

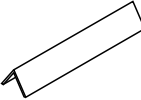

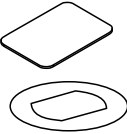

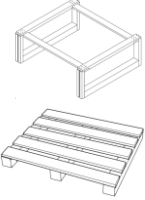

Biodegradable packaging covers materials that will break down into the soil or the air over time.

Eco-friendly packaging and ways to protect environment

Thanks to the packaging made from natural materials such as paper or cardboard, the carbon footprint of our those packaging is greatly reduced. Being natural, also they are biodegradable. Part of what makes packaging eco-friendly is its ability to be reused or recycled. By reusing your packaging for things like further packaging or storage, you can extend its lifespan, which reduces the need for new materials, further lowering its carbon footprint. For packages to be recycled properly and easily, separating disposables are important. For this purpose you can refer to below table to evaluate which disposal category your packing is in.

Packing Material Alphanumerical Codes

Disposal Information	 04 PE-LD	 05 PP	 PA	 20 PAP	 21 PAP	 22 PAP	 50 FOR
Description	Bag, stretch	Plastic lashing strip, plastic clamp, plastic sack	Lacing rope	Box	Paper angle board	Label, paperboard	Wooden crates, pallet
Packaging Type	Plastics	Plastics	Plastics	Paper	Paper	Paper	Wood
Packaging Alphanumeric Code	04 PE-LD	05 PP	PA	20 PAP	21 PAP	22 PAP	50 FOR
